

SOMALIA RESILIENCE POPULATION-LEVEL MEASUREMENT ACTIVITY (RPM)

PROGRAM OVERVIEW

BACKGROUND

The Somalia Resilience Population-Level Measurement Activity (RPM) is a Mercy Corps and ACDI/VOCA-implemented five year, USAID-funded \$9 million USD program designed to collaboratively explore and test solutions for user-centered resilience measurement in USAID's focal zone. The program will use population-level resilience measurement and a participatory approach to facilitate the use of resilience-oriented results frameworks as a common entry point to unpack resilience learning questions. RPM will help aid stakeholders better align their interventions in a shared resilience vision, strengthening the foundations for collective impact in Somalia's recurrent and protracted crisis context.

GOAL

Inform and improve stakeholder activities that contribute to resilience capacities that matter most for populations in the target zone.

OBJECTIVES

1. Participating stakeholders have the ability to estimate their individual contributions to collective resilience outcomes.
2. Population-level change in resilience is assessed through an innovative mixed methods measurement system.

THEORY OF CHANGE
